OUTLINE

- Executive Summary
- Introduction
- Methodology
- Results
 - Visualization – Charts
 - Dashboard
- Discussion
 - Findings & Implications
- Conclusion
- Appendix

EXECUTIVE SUMMARY

- Introduction to Survey
- Methodology
 - Languages Used
 - Visualization tools
 - Analysis tools
- Results of the survey
- Implications of the data
- Summary and moving forward

INTRODUCTION

- Stack Overflow's survey of developers is a large and comprehensive survey
- A random sample of this data was taken to draw conclusions
- Includes current usage statistics and predicted language growth
- Includes developer demographics
 - Results of education level
 - Gender distribution

METHODOLOGY

- Web Scrapping and data gathering
 - Using Python and its module, BeautifulSoup and APIs
- Data Wrangling
 - Cleaning data by removing duplicates and missing values
 - Used NumPy and Pandas – Python libraries
- Data Analysis
 - Usage of Pandas and Seaborn – python libraries
 - Used these for analysis of correlation, finding outliers, trends in data
 - Used Python and SQL to generate charts to explore data
- Data Visualization
 - Used Python to generate exploratory charts
 - Used IBM Cognos to generate dashboards for presentation of data insights

RESULTS

PROGRAMMING LANGUAGE TRENDS

Current Year

Top Ten Languages Worked With

Next Year

Top Languages Programmers Want to Learn

PROGRAMMING LANGUAGE TRENDS - FINDINGS & IMPLICATIONS

Findings

- JavaScript is the top language used and that programmers want to learn
- Kotlin and Go are new languages showing up on the list of languages desired for use
- Python, SQL, and HTML/CSS are not top languages, but solid in the amount of use and interest

Implications

- JavaScript shows the potential for the most growth
- Kotlin and Go – both languages in use for Google – have generated interest in programmers
- Full stack development – Python, JavaScript, HTML/CSS – show consistent interest and use

DATABASE TRENDS

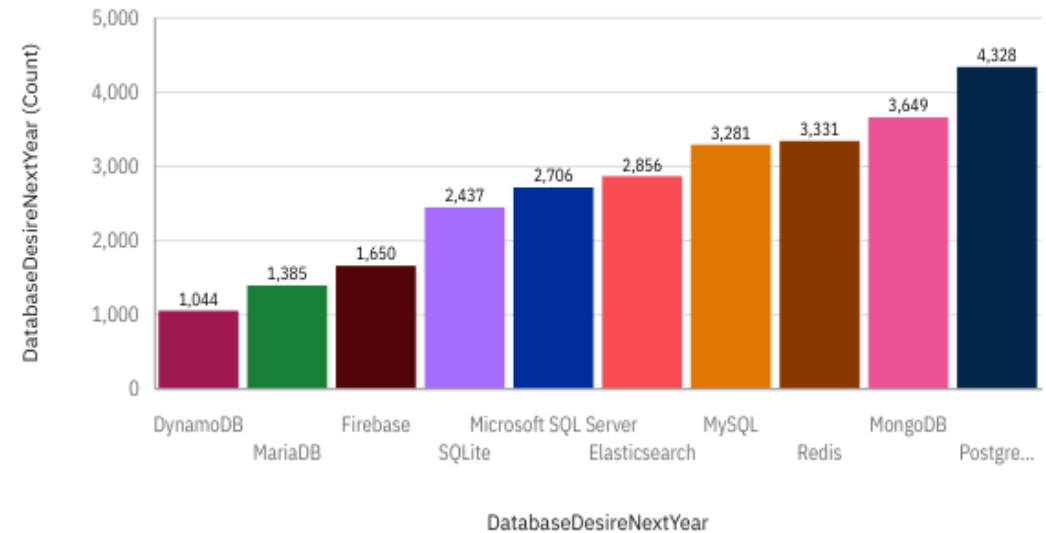

Current Year

Top Ten Databases Worked With

Next Year

Top Databases Programmers Want to Learn

DATABASE TRENDS - FINDINGS & IMPLICATIONS

Findings

- MySQL is the most used database
- MongoDB and Redis have interest from developers
- Microsoft, Progestre, and MySQL are the top three databases used

Implications

- With a lead in usage and interest, MySQL is a good choice for database use with its developer base
- MongoDB and Redis show potential for growth
- With interest in them, the top three databases do not seem to be in danger of changing

DASHBOARD

Demographics

Respondent by Gender

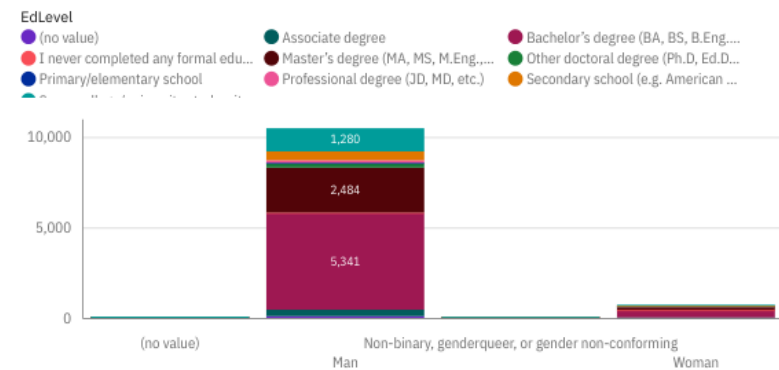

Respondent for Country regions

Respondent by Age

Respondent by EdLevel and Gender

DISCUSSION

OVERALL FINDINGS & IMPLICATIONS

Findings

- The vast majority of respondents identified as male
- Most developers have a formal education
- Linux, Docker, and AWS are three platforms with interest

Implications

- Further research could be done to see how the developer environment treats gender minorities
- What space does the developer environment have for self taught programmers?
- Potential for more Linux integration could drive sales

CONCLUSION

- JavaScript shows the most potential for growth with an already solid userbase
- MySQL, Microsoft SQL, and PostgreSQL show solid userbases and interest
- Google languages like Kotlin and GO show increased interest
- Linux integration could attract more developers

APPENDIX

- Further insights
- Major city centers show the most developer job postings
- Further research into remote work could lead to more insights
